

ANNA BOBRENKO

Level Designer · Scene Architect · Mid-level · 5 years of experience

Remote · annabobrenkold@gmail.com · [Portfolio](#) · [LinkedIn](#)

PROFILE

Level Designer and Scene Architect with 5 years of experience in AAA and mid-core projects. I specialize in creating readable, atmospheric, and gameplay-balanced levels — from blockout to final scene polish. Strong in environmental storytelling, pacing, combat/encounter design, and lighting + atmosphere. I actively use AI tools (Unreal AI, Midjourney, Stable Diffusion, Codex, Claude) to speed up blockout, concepting, and iterations. Across recent projects I increased player retention on key levels by 18–27% and reduced scene production time by 25–35%. Looking for a team where I can influence level design end-to-end and help evolve the production pipeline.

WORK EXPERIENCE

Level Designer / Scene Architect · ReLU Games (MIMESIS)

Remote · 2025 — 2026

- Designed and shipped 6 multiplayer maps (2 large, 4 medium) + 3 key station/tram zones for the 4-player co-op horror MIMESIS. Owned layout, exploration pacing, resource loops, and tension zones around AI mimics.
- Rebuilt key encounter zones and sightlines — reduced “unfair” mimic-related deaths by 24% according to telemetry, and increased average successful mimic identification time from 47 to 71 seconds.
- Led lighting & atmosphere pass (Lumen, volumetrics, post-process, audio triggers): improved readability of “safe” vs “dangerous” zones. Atmosphere playtest scores rose from 3.6 to 4.5/5.
- Built Level Design Kit + PCG templates for procedural/reshuffled maps. Reduced average time to assemble a new level block from 8 to 5 days (–37%) and sped up iterations by 30% using AI-assisted blockout.
- Collaborated with the AI team to design spaces where mimic behavior became gameplay-readable. Retention on key runs +19%, early drop-off in the first 15 minutes –28%.

Level Designer · Polyarc (Moss: The Forgotten Relic)

Remote · 2022 — 2025

- Designed and shipped 11 puzzle level segments + 5 key story zones for Moss: The Forgotten Relic (combined Moss + Book II + DLC). Total volume ~9 hours of gameplay. Focus on environmental puzzles, intimate scale, and atmospheric exploration.
- Rebuilt traversal and guiding for the small hero (Quill): added soft gates and clearer paths. Completion rate of complex puzzle sections rose from 68% to 86%, average time stuck decreased by 41%.
- Owned environmental storytelling and composition in ruins and mythic locations. Playtest scores for “world immersion” rose from 3.9 to 4.7/5; missed narrative details decreased by 33%.
- Contributed to adapting the VR original to flat-screen: camera, scale, and pacing rework. Reduced drop-off in the first 25 minutes by 29% while preserving the tactile feel of puzzles.
- Led lighting & atmosphere pass together with Environment Artists (Lumen / legacy lighting). Brought scenes to a cinematic look and reduced lighting iteration count by 25%.

Junior Level Designer → Middle Level Designer · VSquad (Track racing / VR shooter)

2022 — 2023

- Worked on 6+ projects (mobile, PC, console) at blockout, whitebox, and greybox stages. Designed levels for action, adventure, and stealth games.
- Mastered the full Level Design cycle in Unreal Engine 4/5 and Unity: from metric grid and modular kits to final handoff of scenes to the Environment team.

SKILLS

Level Design

Blockout / Whitebox / Greybox
Layout & Spatial Design
Pacing & Flow
Combat / Encounter Design
Traversal & Verticality
Environmental Storytelling
Metrics & Telemetry Analysis

Scene Architecture

Lighting & Atmosphere
Composition & Framing
Modular Kit Design
PCG / Procedural Tools
World Partition / Streaming
Post-Process & VFX Setup
Optimization (LODs, Culling)

Tools 2026

Unreal Engine 5 (Lumen, Nanite)
Unity + HDRP
Blender / Maya (blockout)
Midjourney / Flux / SD
Codex / Claude (scripts)
Houdini (basic)
Perforce / Git / Jira

EDUCATION & ADDITIONAL

Taras Shevchenko National University of Kyiv · Computer Graphics · Bachelor’s · 2018–2021

Coursera · Level Design & Environment specializations · 2021–2023

Languages: Ukrainian — native, Russian — fluent, English — B2+/C1 (technical documentation, stand-ups, UE docs)

Strengths: telemetry reading, fast iterations, working within constraints, environmental storytelling, mentoring junior LDs

Interests: PCG pipelines, AI-assisted level generation, immersive sim design, lighting as a gameplay tool
