

ANNA ARTIUKHOVA

Mid-Level Level Designer / Scene Architect

Unity / Unreal Engine | VR Environments | Gameplay Spaces | Modular Real-Time Scenes

Contact +355 688 084 101 | Dorov.ya.anet@gmail.com | [Portfolio](#) | [LinkedIn](#)

CORE SKILLS

Level Design Scene Architecture
VR Environment Design
Gameplay Blockout
Modular Level Design Scene Assembly
Player Flow Spatial Readability
Scale Validation
Environment Composition Lighting Setup
Asset Integration Track Layout Design
Playtesting & Iteration
Real-Time Environments

TOOLS

Unity URP / HDRP Unreal Engine
Blender C# Git Visual Studio

PORTFOLIO FOCUS

- VR-ready Unity environments and scene setup
- Gameplay spaces with readable navigation and scale
- Blockout-to-assembly workflow for real-time scenes

CERTIFICATIONS

- Game Design and Development - Michigan State University
- C# Programming and Unity - University of Colorado System

PROFESSIONAL PROFILE

Level Designer and Scene Architect focused on gameplay-ready real-time environments, VR scenes, modular level layouts, and Unity scene production. Combines level design, scene assembly, player flow, spatial readability, scale validation, lighting setup, and performance-aware optimization to create readable, engine-ready gameplay spaces.

EXPERIENCE

Level Designer / Scene Architect

VSQUAD - Contract, Remote Mar 2026 - Present

- Built VR-ready Unity environments and gameplay spaces, covering scene assembly, scale validation, lighting setup, interaction setup, and performance-aware scene structure.
- Designed and iterated racing track layouts and road blockouts in Unity HDRP, focusing on driving rhythm, corner readability, road width planning, guardrail logic, and playtest-based refinement.
- Prepared engine-ready scenes for review, build testing, and handoff, collaborating around modular assets, real-time constraints, and production workflow requirements.

Level Designer / Scene Architect

Freelance - Remote Jan 2024 - May 2026

- Worked on gameplay-driven scene design for 3D fantasy and isometric action projects, focusing on blockout, modular environment assembly, exploration flow, camera-aware composition, and combat space readability.
- Created structured level layouts supporting navigation, pacing, objectives, landmarks, and player decision-making across different gameplay perspectives.
- Assembled Unity scenes using modular assets, lighting passes, environment dressing, collision/setup awareness, and iterative improvements based on playability and readability.

SELECTED PROJECT EXPERIENCE

- VR-Ready Unity Environment: scene assembly, level blockout, scale validation, lighting setup, interaction setup, and performance-aware optimization for real-time VR experience.
- Racing Track Blockout: route planning, corner readability, driving rhythm, road width validation, guardrail placement logic, testing builds, and iteration based on gameplay feel.
- Fantasy / Isometric Scene Work: modular layout, player pathing, combat readability, landmarks, composition, and exploration flow for gameplay-driven environments.
